

PROTECTION PRODUCTS - RailClamp®
Description

The RailClamp® series is a family of ultra low capacitance TVS arrays designed to protect high speed data interfaces. This series has been specifically designed to protect sensitive components which are connected to high-speed data and transmission lines from overvoltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients). They are designed for use in applications where board space is at a premium. Each device requires less than 1.2mm² of PCB area and will protect up to two high speed data lines.

The monolithic design incorporates surge rated, low capacitance steering diodes and a TVS diode in a single package. Each line has a typical capacitance of <0.5pF to ground. The capacitance of each line is well matched for constant signal balance. A connection to the TVS is provided for protection of external voltage buses, such as those found in USB applications. This device is optimized for ESD protection of portable electronics. They may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 ($\pm 15\text{kV}$ air, $\pm 8\text{kV}$ contact discharge).

The RClamp0502N is in a 6-pin, RoHS/WEEE compliant, SLP1210N6 package. It measures 1.2 x 1.0 x 0.58mm. The small package makes it ideal for use in portable electronics such as cell phones, laptops, and digital still cameras.

Features

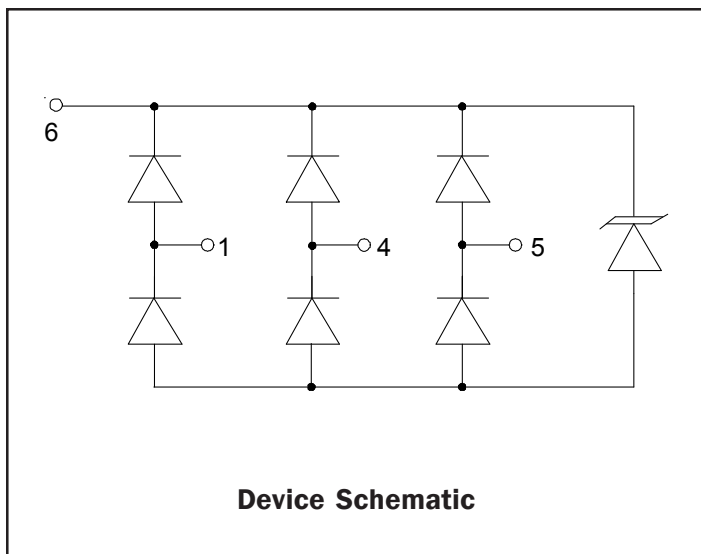

- ◆ ESD protection for high-speed data lines to **IEC 61000-4-2 (ESD) $\pm 15\text{kV}$ (air), $\pm 8\text{kV}$ (contact)**
IEC 61000-4-4 (EFT) 40A (5/50ns)
- ◆ Array of surge rated diodes with internal TVS Diode
- ◆ Small package saves board space
- ◆ Protects two I/O lines and a power line
- ◆ Low capacitance: **0.3pF** typical
- ◆ Low clamping voltage
- ◆ Solid-state silicon-avalanche technology

Mechanical Characteristics

- ◆ SLP1210N6 Package
- ◆ RoHS/WEEE Compliant
- ◆ Nominal Dimensions: 1.2 x 1.0 x 0.58 mm
- ◆ Lead Pitch: 0.4mm
- ◆ Lead Finish: NiPdAu
- ◆ Marking : Marking Code
- ◆ Packaging : Tape and Reel

Applications

- ◆ USB
- ◆ MMC Port
- ◆ Serial ATA
- ◆ Video Port

Applications Information

Device Connection Options for Protection of Two High-Speed Data Lines

Data line inputs are normally connected at pins 4 & 5 with the outputs connected at pins 2 & 3. Pin 1 is connected to ground. Note that the circuit at the ground pin is identical to the circuit at each data input/output pin. This is done to further reduce capacitance. The connection to ground should be made directly to a ground plane. The path length should also be kept as short as possible to minimize parasitic inductance. Pin 6 can be connected to Vcc biased or left not connected depending upon the application.

Figure 1- Pin Configuration & Circuit Diagram

Figure 2 - USB 2.0 High Speed Protection

Protecting USB 2.0 Interfaces

The USB interface consists of Data (D- and D+) lines and a 5.25V voltage bus. Since these pins are part of the connector, they are vulnerable to ESD and cable discharge events. The RClamp0502N is designed to protect all four USB connections (VCC, D-, D+, and Gnd). Each device will protect one USB port. When the voltage on the data lines exceed the bus voltage (plus one diode drop), the internal rectifiers are forward biased conducting the transient current away from the protected controller chip. The TVS diode directs the surge to ground. The TVS diode also acts to suppress ESD strikes directly on the voltage bus. Thus, both power and data pins are protected with a single device.
