

1 Overview

1.1 Features

- Optimized for headlight beam control applications
- Delivers up to 0.8 A
- Low saturation voltage;
typ. 1.2 V total @ 25 °C; 0.4 A
- Output protected against short circuit
- Overtemperature protection with hysteresis
- Over- and undervoltage lockout
- No crossover current
- Internal clamp diodes
- Green Product (RoHS compliant)
- AEC Qualified

1.2 Description

The TLE 4209A is a protected H-Bridge Driver designed specifically for automotive headlight beam control and industrial servo control applications.

The part is built using Infineons bipolar high voltage power technology DOPL.

The device is available in a PG-DIP-8-4 package.

The servo-loop-parameter pos.- and neg. Hysteresis, pos.- and neg. deadband and angle-amplification are programmable with external resistors.

An internal window-comparator controls the input line. In the case of a fault condition, like short circuit to GND, short circuit to supply-voltage, and broken wire, the TLE 4209A stops the motor immediately (brake condition).

Furthermore the built in features like over- and undervoltage-lockout, short-circuit-protection and over-temperature-protection will open a wide range of automotive- and industrial applications.

1.3 Pin Definitions and Functions

Pin No. PG-DIP-8-4	Symbol	Function
1	FB	Feedback Input
2	HYST	Hysteresis I/O
3	OUT1	Power Output 1
4	V_S	Power Supply Voltage
5	OUT2	Power Output 2
6	GND	Ground
7	RANGE	Range Input
8	REF	Reference Input

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
